

Clinical Communications Suite Now

PatientKeeper is offering a hosted solution called **Clinical Communications Suite Now** to address providers' immediate and exploding needs for instant anytime, anywhere access to patient data and secure messaging with physician peers, via smartphones and tablets. In crisis care settings – imagine a physician working in a parking lot triage tent, or quarantined at home in the middle of the night – instant access to patient records and communication with care team members from mobile devices is essential. PatientKeeper Clinical Communications Suite Now optimizes and integrates with MEDITECH® EHR systems that do not provide such functionality natively. It is available on a six-month renewable contract for an affordable fixed fee, with a low-overhead implementation.

Advantages to providers:

- Immediately access patient records via native iOS and Android apps on smartphones and tablets
- Securely instant message care team members, consultants, practice administrators, and any other necessary hospital staff, with embedded patient context
- Share quick notes about patients with other providers using a simple “scratch pad” to capture the most salient points -- ideal for handing off to coverage and/or in a high-volume, high-throughput crisis care / triage environment
- Support telemedicine practice by enabling remote access to patient records
- Treat more patients, more quickly

Advantages to hospital IT:

- Low-overhead deployment
- Hosted solution, minimal on-site IT requirements
- Limited six-month commitment
- Confidence that comes from working with PatientKeeper, which has tens of thousands of mobile app users at healthcare facilities across North America and the UK and 20 years of experience
